APCP Series

Overview

Power inductors are passive electronic components used in various circuits to store energy in a magnetic field when electrical current flows through them. They are critical in filtering, energy storage, and noise suppression in power electronic systems. They are designed to handle higher currents and are optimized for minimal power loss and thermal efficiency.

Benefits

1. Automotive grade available
2. Dual winding in one ferrite core(Mn-Zn, Ni-Zn Material)
3. Good power factor(PFC) & high efficiency
4. SEPIC circuit application
5. No thermal aging

Applications

1. Automotive Systems for Lamp, Lighting
2. EMI solutions
3. Wide input voltage DC to DC converter(SEPIC)
