Safety Standard Recognized, C700, Encapsulated, KJY Type, X1 440/400 VAC/Y2 300/250 VAC (Industrial Grade)

Radial Leaded Ceramic Disc Capacitors

Overview

KEMET's C700 encapsulated radial leaded ceramic disc capacitors are specifically designed for interference-suppression AC line filtering applications. Having internationally recognized safety certifications, these capacitors are well-suited for applications that require keeping potentially disruptive or damaging line transients and EMI out of susceptible equipment. They are also an ideal solution when needing to suppress line disturbances at the source.

Safety Certified Capacitors are classified as either X and/or Y capacitors. Class X capacitors are primarily used in line-to-line (across-the-line) applications. In this application, there is no danger of electric shock to humans should the

capacitor fail, but could result in a risk of fire. The class Y capacitor is primarily used in line-to-ground (line by-pass) applications. In this application, failure of the capacitor could lead to danger of electric shock.

With a working voltage of 440/400 VAC in line-to-line (Class X) and 300/250 VAC in line-to-ground (Class Y) applications, these safety capacitors meet the impulse test criteria outlined in IEC Standard 60384. Meeting subclass X1 and Y2 requirements, these devices are certified to withstand impulses up to 4 KV (X1) and 5 KV (Y2) respectively. These encapsulated devices also meet the flame test requirements outlined in UL Standard 94 V-0.

Benefits

- · Safety standard recognized (IEC 60384-14)
- · Reliable operation up to 125°C
- Class X1 440/400 VAC/Y2 300/250 VAC
- 5.0 mm, 7.5 mm, 10 mm, and 12.5mm lead spacing
- · Lead(Pb)-free and RoHS Compliant
- Halogen-free
- Capacitance offerings ranging from 100 pF up to 10 nF
- Available capacitance tolerances of ±5%, ±10%, and ±20%
- · High-reliability
- · Preformed (crimped) or straight lead configurations
- · Non-polar device, minimizing installation concerns
- Encapsulation meets flammability standard UL 94 V-0

Applications

Typical applications include:

- · Line-to-line (Class X) filtering
- · Line-to-ground (Class Y) filtering
- Antenna coupling
- Primary and secondary coupling (switching power supplies)
- Line disturbances suppression (motors and motor controls, relays, switching power supplies and invertors)

¹ Due to a high risk of arcing, "Inside Kink" lead configuration cannot be combined with the 5 mm lead spacing option. The "Inside Kink" option is only available on capacitors with lead spacing of 7.5 mm or greater. A potential for arcing may exist when combining the "Inside Kink" lead configuration with a 7.5 mm lead spacing option, especially in high humidity environments and/or when exposure to voltages and transients may impact creepage and clearance requirements.

Packaging C-Spec Ordering Options Table

Packaging Type	Lead Length (mm) ^{2,3}	Packaging Ordering Code (C-Spec)
Reel	See Note 2	7301
Ammo Pack	See Note 2	7317
	3.5 ±1.0	WL35
Bulk Bag	5.0 ±1.0	WL50
	25.0 mm Minimum	WL25

¹ For nonstandard lead length inquiries, please contact KEMET.

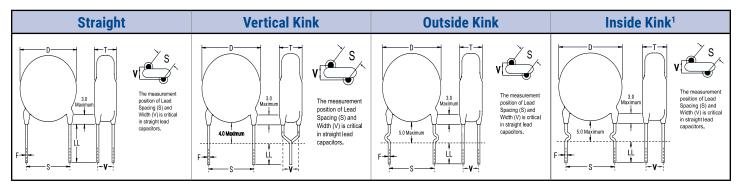

² Capacitor body diameter will limit available lead spacing and packaging options. See "Dimensions" and "Product Ordering Codes and Ratings" sections of this document to determine availability.

³ Bulk packaging lead length availability is dependent upon "Lead Configuration" and "Lead Spacing." See "Dimensions" section of this document to verify availability of a specific lead length option. For nonstandard lead length inquiries, please contact KEMET.

 $^{^{2}}$ Lead length for ammo and reel pack packaging is defined by the H and H0 dimensions in Table 3.

Lead Configurations

¹Due to a high risk of arcing, the "Inside Kink" lead configuration option cannot be combined with 5 mm lead spacing ("S" dimension above). The "Inside Kink" option is only available on devices with lead spacing of 7.5 mm, 10 mm, or 12.5 mm.

These devices are TUV and UL recognized for antenna coupling and AC line-to-line (Class X) and line-to-ground (Class Y) applications per IEC60384-14 and UL 60384-14.

Environmental Compliance

These devices are Halogen-free and RoHS Compliant. They meet all requirements set forth by both EU and China RoHS directives.

 $^{^{1}}$ "Room Condition" is defined as follows: Temperature: 20 ~ 35°C/Humidity: 45 ~ 75%/Atmospheric Pressure: 86 ~ 106 kPa.

Table 2 - Performance & Reliability: Test Methods and Conditions cont.

Item	Specification	Test Method				
Flame Test	The capacitor flame extinguishes as follows: Cycle Time 1 ~ 4 30 seconds maximum 5 60 seconds maximum	The capacitor is exposed to a flame for 15 seconds and then removed for 15 seconds. This test is repeated for 5 cycles. Capacitor Flame Gas Burner (Unit:mm)				
Active Flammability	The cheesecloth should not ignite.	The capacitors are individually wrapped in at least one, but not more than two, complete layers of cheesecloth. They are then subjected to 20 discharges. The interval between successive discharges is 5 seconds. The VAC is maintained for 2 minutes after the last discharge. $ \begin{array}{c ccccccccccccccccccccccccccccccccccc$				
Passive Flammability	The burning time should not exceed 30 seconds. The tissue paper should not ignite.	The capacitor under test is held into a flame and in a position which best promotes burning. Each specimen is exposed to the flame once. Test Specimen About 10mm Thick Board Time of Exposure to Flame: 30 seconds Length of Flame: 12 ±1 mm Gas Burner Length: 35 mm minimum Inside Diameter: 0.5 ±0.1 mm Outside Diameter: 0.9 mm maximum Gas Butane Gas Purity: 95% minimum				

 $^{^{1}}$ "Room Condition" is defined as follows: Temperature: 20 ~ 35°C/Humidity: 45 ~ 75%/Atmospheric Pressure: 86 ~ 106 kPa.

Soldering and Mounting Information

Soldering:

When soldering this product to a PCB/PWB, do not exceed the solder heat resistance specification of the capacitor. Subjecting this product to excessive heating could reflow the solder joint between the lead and ceramic element and/or may result in thermal shocks that can crack the ceramic element.

When soldering these capacitors with a soldering iron, it should be performed under the following conditions:

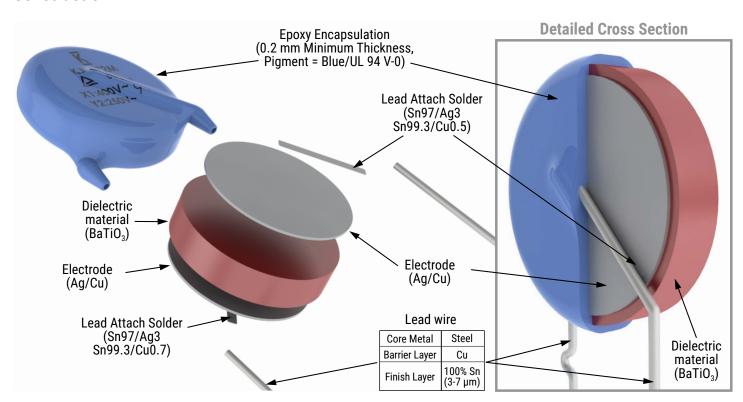

- Temperature of iron-tip: 400°C maximum
- · Soldering iron wattage: 50 W maximum
- · Soldering time: 3.5 seconds maximum

Cleaning (ultrasonic cleaning):

To perform ultrasonic cleaning, observe the following conditions:

- · Rinse bath capacity: output of 20 watts per liter or less
- · Rinsing time: 5 minute maximum
- Do not vibrate the PCB/PWB directly
- Excessive ultrasonic cleaning may lead to fatigue destruction of the lead wires

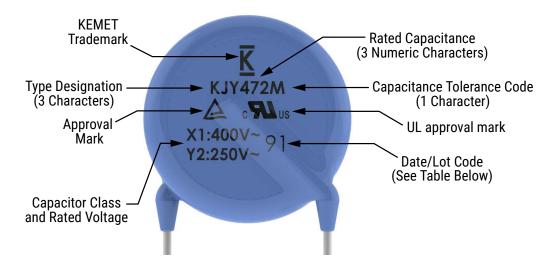

Construction

Marking

These capacitors shall be laser marked with KEMET's trademark, type designation, capacitor class, rated voltage, rated capacitance, and capacitance tolerance codes. In addition, all devices are marked with the recognized approval mark and a date/lot code for traceability. Marking will be supplied on one side of the encapsulated capacitor body. All marking shall be legible to allow for clear identification of the component. Marking appears in legible contrast. Illustrated below is an example of the marking format and content.

Date/Lot Code e.g., 9D (December 2019, Taiwan)

Item	Symbol		Dimensions (mm)										
Lead Spacing	F	5.0 ±1.0				7.5 ±1.0				10.0 ±1.0		12.5 ±1.0	
Component Pitch	Р	12.7 ±1.0	25.4 ±2.0	12.7 ±1.0	25.4 ±2.0	12.7 ±1.0	25.4 ±2.0	12.7 ±1.0	25.4 ±2.0	25.4	±2.0	25.4 ±2.0	
Sprocket Hole Pitch	P ₀	12.7 ±0.3				12.7 ±0.3				12.7 ±0.3		12.7 ±0.3	
Sprocket Hole Center to Component Center	P ₂	6.35 ±1.5	12.7 ±1.5	6.35 ±1.5	12.7 ±1.5	6.35 ±1.5	12.7 ±1.5	6.35 ±1.5	12.7 ±1.5	12.7	±1.5	12.7 ±1.5	
Sprocket Hole Center to Lead Center	P ₁	3.85 ±0.7	10.2 ±1.5	3.85 ±0.7	10.2 ±1.5	2.6 ±0.7	8.95 ±1.5	2.6 ±0.7	8.95 ±1.5	7.7	±1.5	6.45	±1.5
Body Diameter	D	See "Product Ordering Codes and Ratings" section of this document.											
Component Alignment (side/side)	ΔS	0 ±2.0											
Carrier Tape Width	W	18.0 +1.0/-0.5											
Sprocket Hole Position	W ₁	9.0 ±0.5											

¹ Preformed (crimped) lead configurations include vertical kink, outside kink, and inside kink. See "Lead Configurations" and "Ordering Information" sections of this document for further details.

² Also referred to as "lead length" in this document.

Table 3 - Ammo Pack Taping Specifications cont.

Lead Spacing		5 mm		7.5	mm	10	mm	12.5 mm				
Lead Style		Straight Preformed ¹		Straight Preformed ¹		Straight Preforme		Straight	Preformed ¹			
Item	Symbol	Dimensions (mm)										
Height to Seating Plane ² (preformed leads ¹)	H _o	N/A	16.0 +2.0/-0	N/A	16.0 +2.0/-0	N/A	16.0 +2.0/-0	N/A	16.0 +2.0/-0			
Height to SeatingPlane ² (straight leads)	н	20.0 +1.5/-1.0	N/A	20.0 +1.5/-1.0	N/A	20.0 +1.5/-1.0	N/A	20.0 +1.5/-1.0	N/A			
Lead Protrusion	ę	2.0 maximum										
Diameter of Sprocket Hole	D ₀	4.0 ±0.2										
Lead Diameter	φd	0.6 ±0.1										
Carrier Tape Thickness	t,	0.6 ±0.3										
Total Thickness (Carrier Tape, Hold- Down Tape and Lead)	t ₂	1.5 maximum										
Component Alignment	Δh ₁											
(front/back) Δh_2	Δh_2	2.0 maximum										
Cut Out Length	L	11.0 maximum										
Hold-Down Tape Width	W _o	10.0 minimum										
Hold-Down Tape Position	W ₂	3.0 maximum										
Coating Extension on Leads (meniscus)	е	3.0 maximum for straight lead; not to exceed the bend for preformed1 lead configurations.										
Body Thickness	Т	8.0 maximum										

¹ Prefromed (crimped) lead configurations include vertical kink and outside kink. See "Lead Configurations" and "Ordering Information" sections of this document for further details.

Application Notes:

Storage and Operating Conditions:

The Insulating coating of these devices does not form an air and moisture tight seal. Avoid exposure to moisture and do not use or store these devices in a corrosive atmosphere, especially where chloride gas, sulfide gas, acid, alkali, salt or the like are present. Before cleaning, bonding or molding these devices, it is important to verify that your process does not affect product quality and performance. KEMET recommends testing and evaluating the performance of a cleaned, bonded or molded product prior to implementing and/or qualifying any of these processes. Store the capacitors where the temperature and relative humidity do not exceed 40 degrees centigrade and 70% respectively. For optimum solderability, capacitor stock should be used promptly, preferably within 24 months of receipt.

Working Voltage:

Application voltage (Vp-p or Vo-p) must not exceed the voltage rating of the capacitor. Irregular voltages can be generated for a transient period of time when voltage is initially applied and/or removed from a circuit. It is important to choose a capacitor with a voltage rating greater than or equal to these irregular voltages.

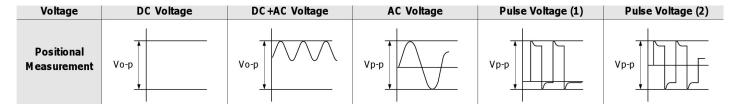

² Also referred to as "lead length" in this document.

Safety Standard Recognized, C700, Encapsulated, KJY Type, X1 440/400 VAC/Y2 300/250 VAC (Industrial Grade)

Radial Leaded Ceramic Disc Capacitors

Application Notes (cont.):

Operating Temperature and Self-Generating Heat:

The surface temperature of a capacitor should be kept below the upper limit of its rated operating temperature range. Be sure to take into account the heat generated by the capacitor itself. When the capacitor is used in a high-frequency current, pulse current or similar current, it may produce self-generated heat due to dielectric loss. Temperature rise due to self-generated heating should not exceed 20°C (while operated at an atmosphere temperature of 25°C).

Handling - Vibration and Impact:

Do not expose these devices or their leads to excessive shock or vibration during use.

FAILURE TO FOLLOW THE ABOVE CAUTIONS MAY RESULT, WORST CASE, IN A SHORT CIRCUIT AND CAUSE FUMING OR PARTIAL DISPERSION WHEN THE PRODUCT IS USED.

Safety Standard Recognized, C700, Encapsulated, KJY Type, X1 440/400 VAC/Y2 300/250 VAC (Industrial Grade)

Radial Leaded Ceramic Disc Capacitors

Disclaimer

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.
