Overview

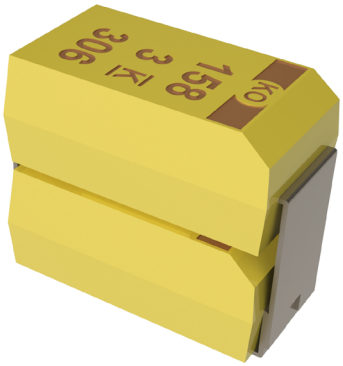

KO-CAP Polymer Capacitors

The KEMET Tantalum Stack Polymer (TSP) Electrolytic Capacitor is designed to provide the highest CV (capacitance/voltage) ratings in a surface mount configuration. All of KEMET's Polymer Electrolytic Solutions are available in a stack configuration.The only exceptions are the facedown series (T523, T527, T528, and T529). These capacitors are utilized in stacks of 2, 3, 4, and 6 components to achieve a broad range of capacitance, ESR, and voltage ratings. Stacking configurations allow for custom capacitance/voltage solutions and very low ESR options.

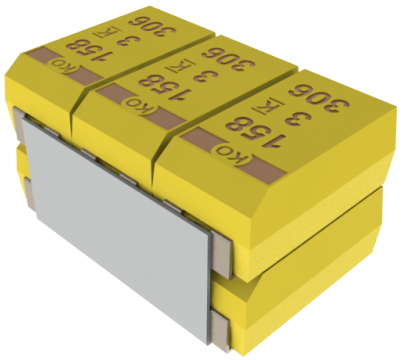

The TSP series is the first polymer electrolytic capacitor available with failure rate options when utilizing KEMET's T540 and T541 Series. The failure rate is determined by utilizing accelerated conditions (voltage and temperature) applied to board mounted samples to assess long term device reliability. The failure rates available are B (0.1% per 1,000 hours), C (0.01% per 1,000 hours), and D (0.001% per 1,000 hours). This method was developed based on over ten (10) years of research and is described in numerous papers available on www.kemet.com.

Note: Custom stacking solutions are also available with other KEMET Polymer Electrolytic Surface Mount products. Please contact KEMET Sales for availability.

Benefits

- Polymer cathode technology
- High capacitance
- Surface mountable
- Capacitance values of 20 – 12,000 µF
- Capacitance can be custom specified
- Voltage ratings of 3 – 75 VDC
- High volumetric efficiency
- Ultra low ESR
- Surge capability
- Operating temperature range of −55°C to +105°C/+125˚C (refer to part number for maximum temperature rating)
- Laser-marked case
- Use up to 90% of rated voltage for part types ≤ 10 V
- Use up to 80% of rated voltage for part types > 10 V
- KEMET's KO-CAP Reliability Assesment method (for the discrete component T540 and T541)

Applications

Typical applications include decoupling, hold-up and filtering in a variety of market segments.
The T540/T541 and T543 Polymer HRA and other tantalum MnO2 HRA and MIL-PRF stack devices can be utilized in defense and aerospace equipment including High Power Amplifiers for radars and multiple applications where GaN active components are part of the design.

Environmental Compliance

RoHS compliant when ordered with 100% Sn solder on both terminations (component and stack)
- Halogen-free
- Epoxy compliant with UL94 V-0
- Molded Epoxy complies for outgassing testing under ASTM E 595.

K-SIM

For a detailed analysis of specific part numbers, please visit https://ksim3.kemet.com/capacitor-simulation to access KEMET's K-SIM software. KEMET K-SIM is designed to simulate behavior of components with respect to frequency, ambient temperature, and DC bias levels.

Performance Characteristics

Item	Performance Characteristics
Operating Temperature	−55°C to 105°C/125°C (refer to part number for maximum temperature rating)
Rated Capacitance Range	20 – 12,000 µF at 120 Hz/25°C
Capacitance Tolerance	K Tolerance (10%), M Tolerance (20%)
Rated Voltage Range	3 – 75 V
DF (120 Hz)	Refer to Part Number Electrical Specification Table
ESR (100 kHz)	Refer to Part Number Electrical Specification Table
Leakage Current	≤ 0.1 CV (µA) at rated voltage after 5 minutes

Qualification

Test	Condition	Characteristics	
Endurance	105°C at rated voltage, 2,000 hours 125°C at 2/3 rated voltage, 2,000 hours	Δ C/C	Within −20/+10% of initial value
		DF	≤ initial limit
		DCL	1.25 x IL at 125°C
		ESR	2 x initial limit
Thermal Shock	KEMET specified test, mounted, −55°C to 105°C/125°C*1, 5 cycles	Δ C/C	Within ±5% of initial value
		DF	Within initial limits
		DCL	Within 1.25 x initial limit
		ESR	Within initial limits
Surge Voltage	85°C, 1.15 x rated voltage 1,000 cycles	Δ C/C	Within ±5% of initial value
		DF	Within initial limits
		DCL	Within initial limits
		ESR	Within initial limits
Surge Voltage	105°C/125°C*1, 0.77 x rated voltage 1,000 cycles	Δ C/C	Within ±5% of initial value
		DF	Within initial limits
		DCL	Within initial limits
		ESR	Within initial limits
Mechanical Vibration	MIL–STD–202, Method 204, Condition D, 10 Hz to 2,000 Hz, 20 G peak	Δ C/C	Within ±10 of initial value
		DF	Within initial limits
		DCL	Within initial limits

*1 *Refer to part number specifications for individual temperature classification*

Reliability

KO-CAP capacitors have an average failure rate of 0.5 %/1,000 hours at category voltage, U_C, and category temperature, T_C. These capacitors are qualified using industry test standards at U_C and T_C. The minimum test time (1,000 or 2,000 hours) is dependent on the product.

The actual life expectancy of KO-CAP capacitors increases when application voltage, U_A, and application temperature, T_A, are lower than U_C and T_C. As a general guideline, when $U_A < 0.9 * U_C$ and $T_A < 85°C$, the life expectancy will typically exceed the useful lifetime of most hardware (> 10 years).

The lifetime of a KO-CAP capacitor at a specific application voltage and temperature can be modeled using the equations below. A failure is defined as passing enough current to blow a 1-Amp fuse. The calculation is an estimation based on empirical results and is not a guarantee.

$$VAF = \left(\frac{U_C}{U_A}\right)^n$$

where:
VAF = acceleration factor due to voltage, unitless
U_C = category voltage, volt
U_A = application voltage, volt
n = exponent, 16

$$TAF = e^{\left[\frac{E_a}{k}\left(\frac{1}{273+T_A} - \frac{1}{273+T_C}\right)\right]}$$

where:
TAF = acceleration factor due to temperature, unitless
E_a = activation energy, 1.4 eV
k = Boltzmann's constant, 8.617E-5 eV/K
T_A = application temperature, °C
T_C = category temperature, °C

$$AF = VAF * TAF$$

where:
AF = acceleration factor, unitless
TAF = accerlation factor due to temperature, unitless
VAF = acceleration factor due to voltage, unitless

$$Life_{U_A,T_A} = Life_{U_C,T_C} * AF$$

where:
$Life_{UA, TA}$ = estimated life application voltage and temperature, years
$Life_{UC, TC}$ = guaranteed life category voltage and temperature, years
AF = acceleration factor, unitless

(1) To complete KEMET part number, insert 65 = 4 cycles +25°C, 66 = 10 cycles +25°C, 67 = 10 cycles -55°C +85°C, 85 = 4 cycles + 25°C + improved humidity, 86 = 10 cycles +25°C +improved humidity, 87 = 10 cycles +55°C and +85°C + improved humidity. Designates surge current option

(2) To complete KEMET part number, insert 05= High ESR ,10 = Standard ESR, 20 = Low ESR. Designates ESR option.

(3) To complete KEMET part number, insert H = Standard solder coated or T = 100% Tin

(4) To complete KEMET part number, insert M for ±20%, K for ±10%. Designates Capacitance tolerance.

(5) To complete KEMET part number, insert D = Silver-plated (Ag) , H = Solder-plated, or T = 100% Tin (Sn). Designates Termination Finish (stack)

(6) To complete KEMET part number, insert D (0.001%/1,000 hours), C (0.01%/1,000 hours), B (0.1%/1,000 hours), or A = N/A. Designates Reliability Level.

(7) To complete KEMET part number, insert E = None, S = 10 cycles at +25°C, W = 10 cycles –55°C and +85°C. Designates surge current option for T543 discrete component

(8) To complete KEMET part number, C (0.01%/1,000 hours), B (0.1%/1,000 hours), or A = N/A. Designates Reliability Level.

(9) To complete KEMET part number, insert D = Silver-plated (Ag) , H = Solder-plated, T = 100% Tin (Sn) or X = Leadless stack.
Please contact your sales representative for availability of engineering samples.

(10) To complete KEMET part number, insert 65 = 4 cycles +25°C, 66 = 10 cycles +25°C, 67 = 10 cycles -55°C +85°C Designates surge current option

(1) To complete KEMET part number, insert 65 = 4 cycles +25°C, 66 = 10 cycles +25°C, 67 = 10 cycles -55°C +85°C, 85 = 4 cycles + 25°C + improved humidity, 86 = 10 cycles +25°C +improved humidity, 87 = 10 cycles +55°C and +85°C + improved humidity. Designates surge current option

(2) To complete KEMET part number, insert 05= High ESR ,10 = Standard ESR, 20 = Low ESR. Designates ESR option.

(3) To complete KEMET part number, insert H = Standard solder coated or T = 100% Tin

(4) To complete KEMET part number, insert M for ±20%, K for ±10%. Designates Capacitance tolerance.

(5) To complete KEMET part number, insert D = Silver-plated (Ag) , H = Solder-plated, or T = 100% Tin (Sn). Designates Termination Finish (stack)

(6) To complete KEMET part number, insert D (0.001%/1,000 hours), C (0.01%/1,000 hours), B (0.1%/1,000 hours), or A = N/A. Designates Reliability Level.

(7) To complete KEMET part number, insert E = None, S = 10 cycles at +25°C, W = 10 cycles –55°C and +85°C. Designates surge current option for T543 discrete component

(8) To complete KEMET part number, C (0.01%/1,000 hours), B (0.1%/1,000 hours), or A = N/A. Designates Reliability Level.

(9) To complete KEMET part number, insert D = Silver-plated (Ag) , H = Solder-plated, T = 100% Tin (Sn) or X = Leadless stack.
Please contact your sales representative for availability of engineering samples.

(10) To complete KEMET part number, insert 65 = 4 cycles +25°C, 66 = 10 cycles +25°C, 67 = 10 cycles -55°C +85°C Designates surge current option

(1) To complete KEMET part number, insert 65 = 4 cycles +25°C, 66 = 10 cycles +25°C, 67 = 10 cycles -55°C +85°C, 85 = 4 cycles + 25°C + improved humidity, 86 = 10 cycles +25°C +improved humidity, 87 = 10 cycles +55°C and +85°C + improved humidity. Designates surge current option
(2) To complete KEMET part number, insert 05= High ESR ,10 = Standard ESR, 20 = Low ESR. Designates ESR option.
(3) To complete KEMET part number, insert H = Standard solder coated or T = 100% Tin
(4) To complete KEMET part number, insert M for ±20%, K for ±10%. Designates Capacitance tolerance.
(5) To complete KEMET part number, insert D = Silver-plated (Ag) , H = Solder-plated, or T = 100% Tin (Sn). Designates Termination Finish (stack)
(6) To complete KEMET part number, insert D (0.001%/1,000 hours), C (0.01%/1,000 hours), B (0.1%/1,000 hours), or A = N/A. Designates Reliability Level.
(7) To complete KEMET part number, insert E = None, S = 10 cycles at +25°C, W = 10 cycles –55°C and +85°C. Designates surge current option for T543 discrete component
(8) To complete KEMET part number, C (0.01%/1,000 hours), B (0.1%/1,000 hours), or A = N/A. Designates Reliability Level.
(9) To complete KEMET part number, insert D = Silver-plated (Ag) , H = Solder-plated, T = 100% Tin (Sn) or X = Leadless stack.
Please contact your sales representative for availability of engineering samples.
(10) To complete KEMET part number, insert 65 = 4 cycles +25°C, 66 = 10 cycles +25°C, 67 = 10 cycles -55°C +85°C Designates surge current option

Table 1E – TSP6 Ratings & Part Number Reference Horizontal Construction Available

Rated Voltage	Rated Capacitance	Case Code/ Case Size	KEMET Part Number	DC Leakage	DF	Standard ESR	Maximum Operating Temp
VDC at 105°C	µF	KEMET/EIA	(See below for part options)	µA at +25°C Max/5 Min	% at +25°C 120 Hz Max	mΩ at +25°C 100 kHz Max	°C
75	130	6X	TSP6X137M075A(3)E020S521	990	10	20	125

(3) To complete KEMET part number, insert H = Standard solder coated or T = 100% Tin

Derating Guidelines

Recommended Application Voltage
KO-CAPs are solid state capacitors that demonstrate no wearout mechanism when operated within their recommended guidelines. While the KO-CAP can be operated at full rated voltage, most circuit designers seek a minimum level of assurance in long term reliability, which should be demonstrated with data. A voltage derating can provide the desired level of demonstrated reliability based on industry accepted acceleration models. Since most applications do require long term reliability, KEMET recommends that designers consider a voltage derating, according the graphic above, for the maximum steady state voltage.

Voltage Rating	Maximum Recommended Steady State Voltage	
	−55°C to 105°C	105°C to 125°C
10 V ≤ V_R	90% of V_R	90% of V_R, See Chart
V_R > 10	80% of V_R	54% of V_R, See Chart

V_R = Rated Voltage

Reverse Voltage

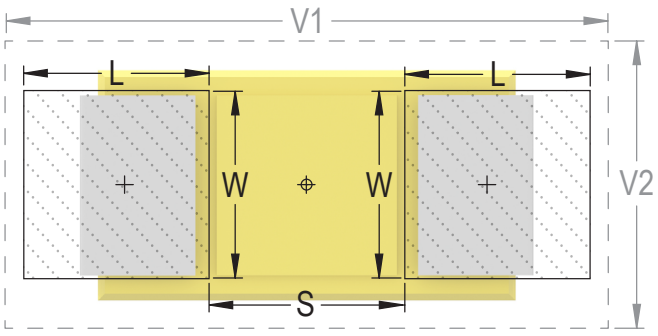

Solid electrolytic capacitors are polar devices and may be permanently damaged or destroyed if connected with the wrong polarity. The positive terminal is identified on the capacitor body by a stripe plus in some cases a beveled edge. A small degree of transient reverse voltage is permissible for short periods per the table. The capacitors should not be operated continuously in reverse mode, even within these limits.

Temperature	Permissible Transient Reverse Voltage
25°C	15% of Rated Voltage
85°C	5% of Rated Voltage
125°C	1% of Rated Voltage

Table 2 – Land Dimensions/Courtyard

Density Level A: *For low-density Product applications. Recommended for wave solder applications and provides a wider process window for reflow solder processes.*
Density Level B: *For products with a moderate level of component density. Provides a robust solder attachment condition for reflow solder processes.*
Density Level C: *For high component density product applications. Before adapting the minimum land pattern variations the user should perform qualification testing based on the conditions outlined in IPC standard 7351 (IPC-7351).*

Grid Placement Courtyard

Soldering Process

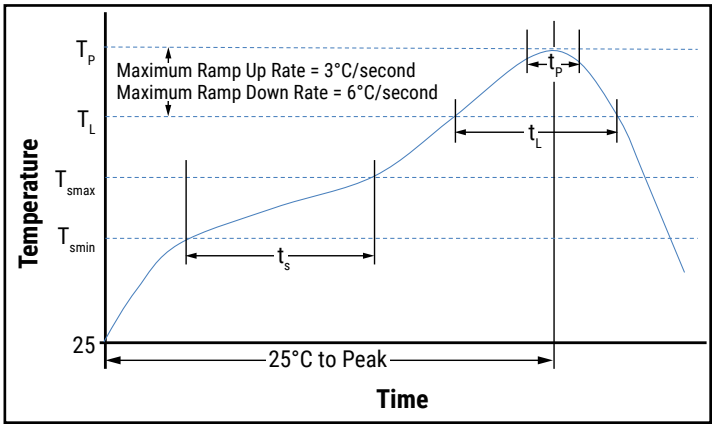

KEMET's families of surface mount capacitors are compatible with wave (single or dual), convection, IR, or vapor phase reflow techniques. Preheating of these components is recommended to avoid extreme thermal stress. KEMET's recommended profile conditions for convection and IR reflow reflect the profile conditions of the IPC/J–STD–020D standard for moisture sensitivity testing. The devices can safely withstand a maximum of three reflow passes at these conditions.

Please note that although the X/7343–43 case size can withstand wave soldering, the tall profile (4.3 mm maximum) dictates care in wave process development.

Hand soldering should be performed with care due to the difficulty in process control. If performed, care should be taken to avoid contact of the soldering iron to the molded case. The iron should be used to heat the solder pad, applying solder between the pad and the termination, until reflow occurs. Once reflow occurs, the iron should be removed immediately. "Wiping" the edges of a chip and heating the top surface is not recommended.

Profile Feature	SnPb Assembly	Pb-Free Assembly
Preheat/Soak		
Temperature Minimum (T_{Smin})	100°C	150°C
Temperature Maximum (T_{Smax})	150°C	200°C
Time (t_s) from T_{smin} to T_{smax})	60 – 120 seconds	60 – 120 seconds
Ramp-up Rate (T_L to T_P)	3°C/seconds maximum	3°C/seconds maximum
Liquidous Temperature (T_L)	183°C	217°C
Time Above Liquidous (t_L)	60 – 150 seconds	60 – 150 seconds
Peak Temperature (T_P)	220°C	250°C
Time within 5°C of Maximum Peak Temperature (t_P)	20 seconds maximum	30 seconds maximum
Ramp-down Rate (T_P to T_L)	6°C/seconds maximum	6°C/seconds maximum
Time 25°C to Peak Temperature	6 minutes maximum	8 minutes maximum

Note: All temperatures refer to the center of the package, measured on the package body surface that is facing up during assembly reflow.

Storage

All KO-Cap Series are shipped in moisture barrier bags (MBBs) with desiccant and humidity indicator card (HIC). These parts are classified as MSL3 (Moisture Sensitivity Level 3) per IPC/JEDEC J-STD-020 and packaged per IPC/JEDEC J–STD–033
MSL3 specifies a floor time of 168H at 30°C maximum temperature and 60% relative humidity
Unused capacitors should be sealed in a MBB with fresh desiccant.
Calculated shelf life in sealed bag:
– 12 months from bag seal date in a storage environment of <40°C and humidity <90% RH
– 24 months from bag seal date in a storage environment of <30°C and humidity <70% RH
If baking is required, refer to IPC/JEDEC J–STD–033 for bake procedure

Packaging Information

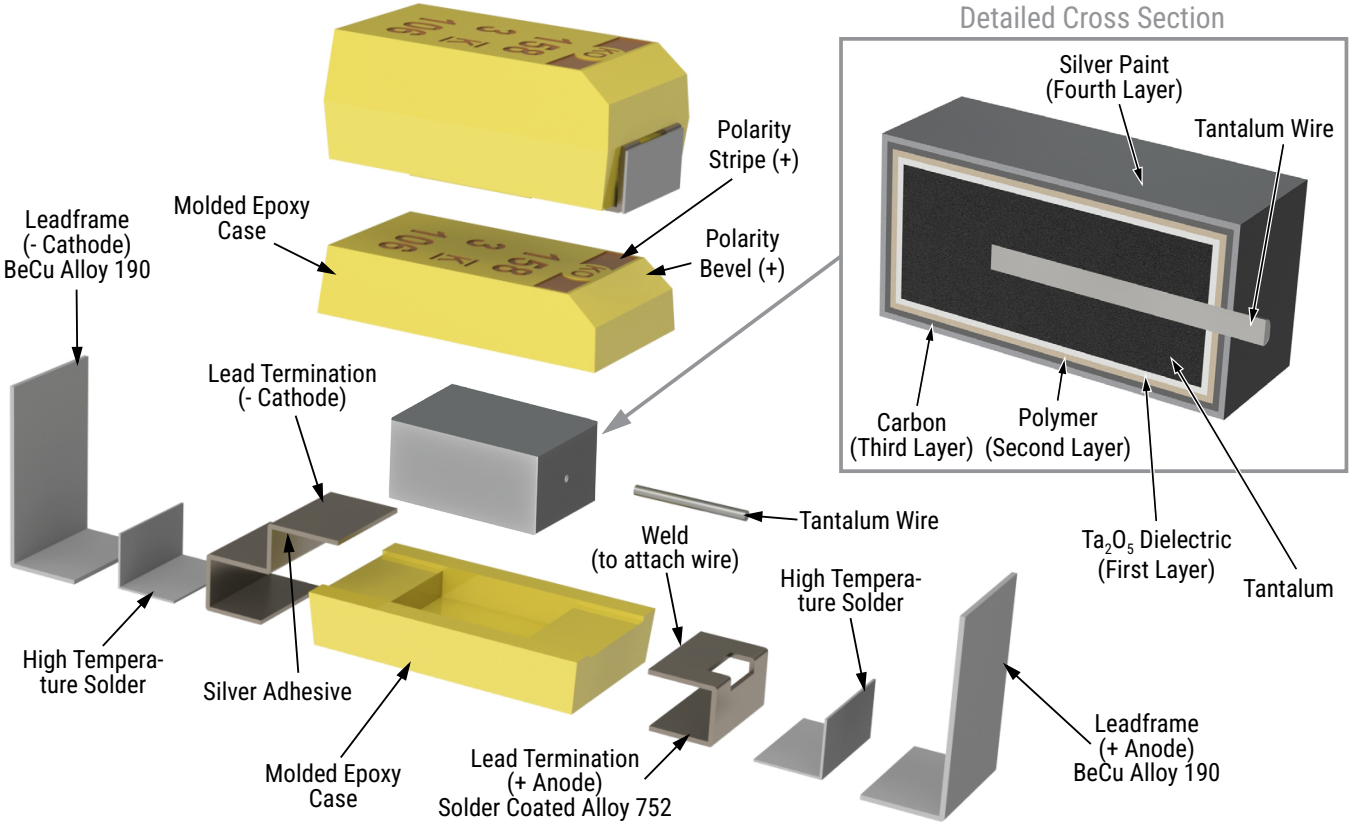

KEMET Tantalum Stack Polymer (TSP) are packed in plastic trays
This packaging method is for manual board placement

Packaging Quantity

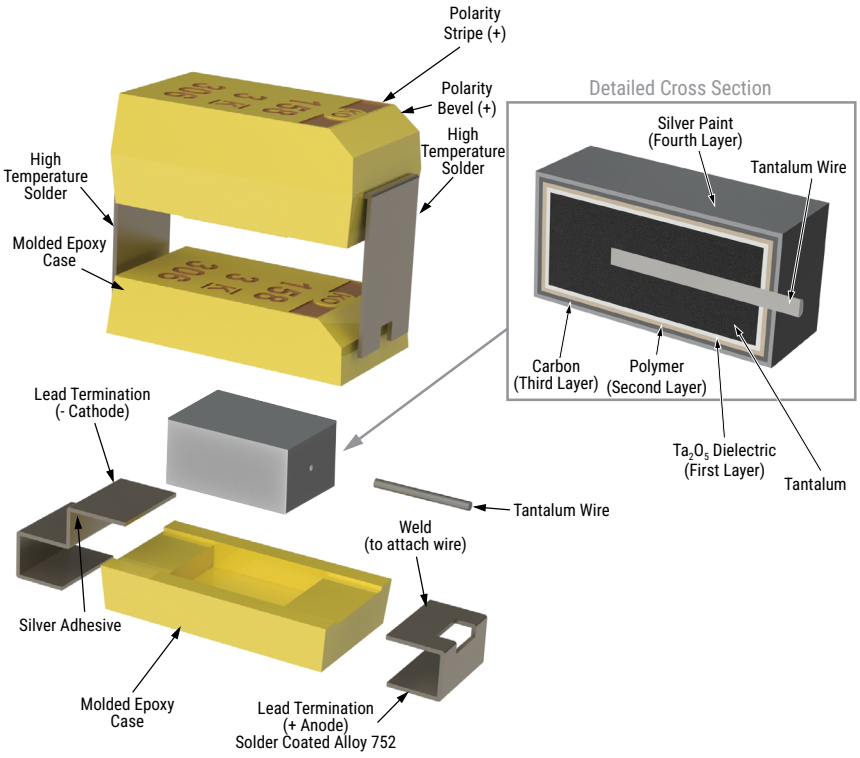

Case Code	Min pcs/tray	Max pcs/tray
2X	1	50
3X	1	50
4X	1	50
6X	1	50

X denotes the different stacks letter (B, C, D, X and O)

Construction- Leaded

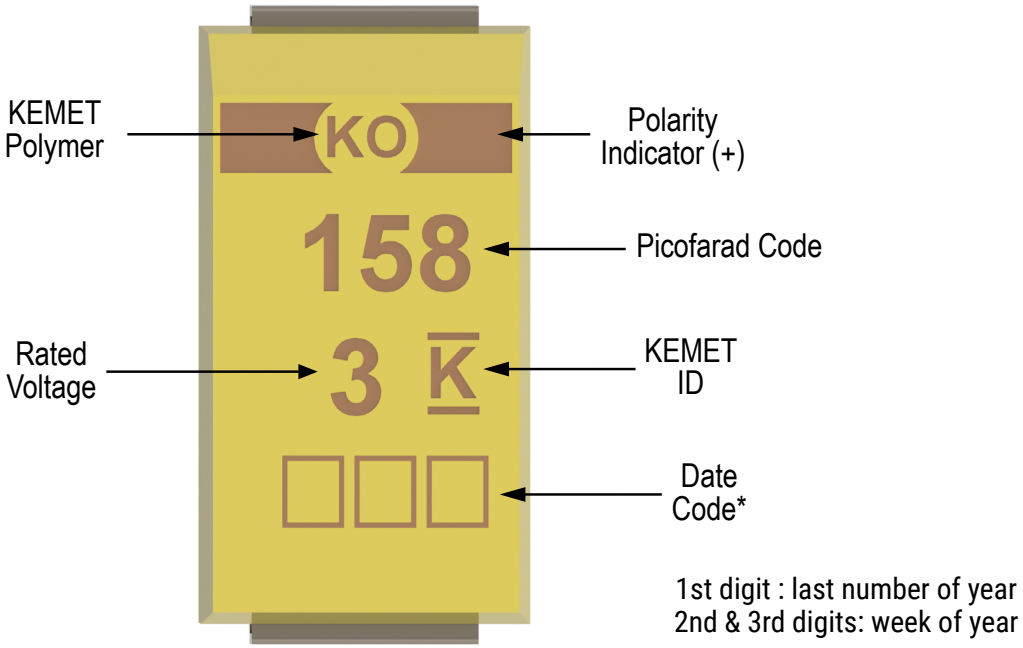

Construction- Leadless

Marking (Discrete Capacitor)

T540/T541/T543

Note: The marking observed is for the discrete capacitor used in the construction of the stacked product

Disclaimer

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product–related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.
